Health & Safety Programs

A comprehensive workplace Health and Safety Program is critical to protecting your employees and your business. While there are plenty of Health and Safety Program templates, a one-size-fits-all approach can still leave your business at risk. These plans won't factor in the specific details of your operations, making them more difficult to implement. Plus, they may not reflect the latest regulations.

Three steps to a customized workplace Health and Safety Program:

We pride ourselves on creating Health and Safety Programs that protect your business from every angle. CCI helps you anticipate hazards and mitigate them before they can cause an accident or injury.

1 | Assessment

CCI will conduct a comprehensive Health and Safety Survey at your facility and/or job sites to understand your operations and review work hazards. We'll observe processes, review incident records, and meet with managers onsite.

2 | Development

Based on the assessment, we will develop a comprehensive set of policies and procedures. Your plan will reflect our knowledge of ever-changing regulatory requirements as well as recommendations and feedback from your management team.

3 | Implementation

CCI will outline steps to apply the new safety policies and procedures into daily work activities. We'll ensure the program becomes a vital resource to reduce potential incidents. We also offer a Safety Program Orientation Training for your employees.

There are many reasons to invest in a Health and Safety Program Today!

Win More Bids

Avoid OSHA Citations

Lower Costs

Increase Productivity

Fewer Delays
